Summary: This site received only 0.56" of rain during the 48 days beginning on June 1. The lack of moisture resulted in poor weed control over nearly all treatments. Quinstar and Prowl H2O applied post transplant resulted in excellent grass control and crop safety. Goal Tender applied post-transplant at the 8 oz/A rate resulted in crop injury ratings approaching 10%. Goal Tender applied pre-transplant continues to provide improved crop safety and weed control as compared to post-transplant applications.

Fertilization and other pesticides: Fall 2011 - dairy replacement pack manure, 160 lb N/A. Warrior 3.2 oz/a - 7/9/12 (cucumber beetle control)

Irrigation: 7/1 - 1.0", 7/17 - 0.8"
